Up the Garden Path

Applying Cyber Deception to the Attack Lifecycle

Up the Garden Path

Applying Cyber Deception to the Attack Lifecycle

Recon

Deploy internal/external sock puppets based on the TA's objective

Perform the same type of recon to ensure our artifacts are discoverable

Phishing, and Smishing

Canary credentials in sock puppet overshares, GitHub projects, and data dumps

Search for objective related documentation and infrastructure

Canary documents reference deception storylines/sock puppets

SEO optimization of ongoing deception storyline content based on query/TTP baseline

Escalate, Exfil, Execute

Build and deploy crown jewel honeypots

Continue deception storyline

Profit

Example Campaign - Operation Hungry Dog

Intel: Threat actors are after our Dog Food recipe.

Objective: Develop and deploy a campaign around the Dog Food recipe

James Fakeperson

- Dog Food optimization engineer
- Vocal on social media and talks about work, favorite sports teams, etc.
- Sloppy dev that sometimes puts work on his personal Github

```
# Cowrie configuration file (cowrie.cfg)

# =====
# General Honeypot Options
# =====
[honeypot]

# Sensor name is used to identify this Cowrie instance. Used by the database
# logging modules such as mysql.
# If not specified, the logging modules will instead use the IP address of the
# server as the sensor name.
# (default: not specified)
#sensor_name=myhostname

# Hostname for the honeypot. Displayed by the shell prompt of the virtual
# environment.
# (default: svr04)
hostname = fileserv04

# Directory where to save log files in.
# (default: log)
log_path = log
```

Dog Food Honeypot Servers

- Keeps threat busy and enticed without causing damage
